

## General Decontamination

Floodwaters may be contaminated with sewage and decaying animal and human remains. Disinfection of hands, clothing, tools/equipment, and surfaces in work areas is critical in disease prevention.

### Hand Decontamination

- Wash hands completely with soap and water.
- Rinse completely; dry with a clean towel or air dry.

### Clothing, Tool/Equipment Decontamination

- It is preferable to use soap and clean water when available.
- If only contaminated water is available, mix  $\frac{1}{4}$  cup bleach per gallon of water.
- Immerse objects in solution for 10 minutes; if clothing, gently agitate periodically.
- Transfer objects to hand wash solution for 10 minutes; if clothing, gently agitate periodically.
- Allow clothes and tools/equipment to thoroughly air-dry before re-use.

### Severe Surface Decontamination

Use for decontaminating only the most seriously affected surfaces.

- Mix  $1\frac{1}{2}$  cups bleach per gallon of water.
- Douse surfaces with heavy contamination and allow to sit for 3 minutes.
- Wipe the contamination from the surface with a paper towel and douse the surface again but use the hand wash solution.
- Wipe off residual contamination with a paper towel.

### Important Considerations

- Use gloves and eye protection.
- Prepare bleach solutions **daily** and allow to stand for at least 30 minutes before use.
- All containers should be labeled **"Bleach-disinfected water, DO NOT DRINK."** **CAUTION: Do not mix bleach with products containing ammonia.**
- Do not immerse electrical or battery operated tools/equipment in solutions; clean exterior with a rag soaked with soap and water or disinfectant solution.
